nag_prob_der_landau (g01rtc)

1 Purpose

nag_prob_der_landau (g01rtc) returns the value of the derivative $\phi'(\lambda)$ of the Landau density function.

2 Specification

double nag_prob_der_landau (double x)

3 Description

nag_prob_der_landau (g01rtc) evaluates an approximation to the derivative $\phi'(\lambda)$ of the Landau density function given by

$$\phi'(\lambda) = \frac{d\phi(\lambda)}{d\lambda},$$

where $\phi(\lambda)$ is described in nag_prob_density_landau (g01mtc), using piecewise approximation by rational functions. Further details can be found in Kölbig and Schorr (1984).

To obtain the value of $\phi(\lambda)$, nag_prob_density_landau (g01mtc) can be used.

5 Parameters

1: x – double

Input

On entry: the argument λ of the function.

6 Error Indicators and Warnings

None.

7 Accuracy

At least 7 significant digits are usually correct, but occasionally only 6. Such accuracy is normally considered to be adequate for applications in experimental physics.

Because of the asymptotic behaviour of $\phi'(\lambda)$, which is of the order of $\exp[-\exp(-\lambda)]$, underflow may occur on some machines when λ is moderately large and negative.

8 Further Comments

None.

9 Example

The example program evaluates $\phi'(\lambda)$ at $\lambda = 0.5$, and prints the results.
